K-12 Map Title

¹⁰⁰ Percentage of K-12 beds in the facility that are available during the most recent 12 days is calculated by dividing the number of available beds over the most recent 12 days by the total number of beds available over the most recent 12 days and multiplying by 100. Having the most available beds over the most recent 12 days does not necessarily mean that the facility has the most available beds over the entire year. For example, a facility that has 100 beds available over the most recent 12 days but 200 beds available over the rest of the year would have a higher percentage of beds available over the most recent 12 days than a facility that has 100 beds available over the most recent 12 days and 100 beds available over the rest of the year. The data is used to determine the percentage of beds available over the most recent 12 days and is not used to determine the total number of beds available over the entire year.
